

Authors

Tien Chi Chen

Sc.B. in Chemistry, Brown University, 1950; M.A. in Chemistry, Duke University, 1952; Ph.D. in Physics, Duke University, 1957. Joined IBM in 1956 and has been working on solution of problems in mathematical physics by means of digital computers, in Applied Mathematics Department at the Research Center in Ossining, New York. He is a member of the American Physical Society, the Mathematical Association of America, the American Mathematical Society, Sigma Pi Sigma, Phi Lambda Upsilon, Sigma Xi and Phi Beta Kappa.

Wesley E. Dickinson

B.S.E.E., North Dakota State College, 1940; S.M.E.E. Massachusetts Institute of Technology, 1945. Joined IBM San Jose Research Laboratory in 1952. Formerly worked on the disk file portion of the RAMAC and is now engaged in character-recognition research. Is a member of Sigma Xi and AIEE.

Betty J. Flehinger

A.B., summa cum laude, Barnard College, 1941; M.A. in Physics, Cornell University, 1942; candidate for Ph.D. in Applied Mathematics, Columbia University. Research Assistant, Columbia University, 1952-1957; Pfister Fellow, 1956-1957. Member of Reliability Group, Watson Research Laboratory since September 1957. Member of American Mathematical Society, Phi Beta Kappa.

Albert S. Hoagland

B.S., 1947, M.S., 1948, and Ph.D., 1954, in Electrical Engineering at the University of California. Consultant for IBM and assistant professor at the University of California from 1954 to 1956. Joined the staff of the IBM Research Laboratory in San Jose in 1956 and is now in charge of the development of magnetic memory systems. Member of Sigma Xi, Tau Beta Pi, Eta Kappa Nu, Phi Beta Kappa, AIEE and is a senior member of the IRE.

Joachim Jeenel

Attended the University and the Technische Hochschule in Breslau, Germany, studying mathematics, physics and electronics. Degree: Diplom Mathematiker, 1943, equivalent of master's degree in mathematics. Joined IBM in 1949 as a programmer in the Pure Science Department.

Transferred to Watson Laboratory in 1951 to work with the group which designed the NORC. Since 1955 has been engaged in programming research and has been teaching courses on programming at Columbia University.

Hans Peter Luhn

Was graduated from Schweizerische Handels Hochschule, St. Gall, Switzerland in 1921. Joined IBM in 1941 and is presently in charge of information retrieval research at the Yorktown Research Center. Has worked also on decision circuit design logic, binary arithmetic systems and switching devices, a method of optimizing switching circuits, addressing schemes for random-access memories and on an electronic searching selector. Member of IRE, ACM, AAAS, ADI, and the Literature Division of the ACS.

W. Wesley Peterson

A.B., 1948; B.S.E., 1949; M.S.E., 1950; Ph.D., 1954, University of Michigan. Joined IBM Poughkeepsie Laboratory in 1954, where he worked in the 705 Planning Department and the Information Research Department. Since September 1956 he has been at the University of Florida, where he is Associate Professor of Electrical Engineering. He is a member of the IRE, AIEE, American Mathematical Society and Sigma Xi.

Peter J. Price

Studied physics at Oxford and Cambridge Universities, obtaining a Ph.D. in theoretical physics from the latter in 1951. Subsequently research assistant to the late Fritz London at Duke University, and a member of the Institute for Advanced Study at Princeton, before joining IBM in 1953. Since then he has been a member of the physics group of Watson Research Laboratory at Columbia University. His principal field of research is solid-state physics.

Raymond A. Skov

B.S.E.E., City College of New York, 1949; M.E.E., Polytechnic Institute of Brooklyn, 1956. Joined IBM in 1949 and has been engaged recently in field coordination and engineering planning of tape systems and is now developing magnetic tape devices at Poughkeepsie Product

Development Laboratory. Member of IRE and of its Professional Group on Electronic Computers.

Robert M. Walker

Radio Engineer, KOMO-KJR, Seattle, Washington, 1935-41; Staff Member, Radiation Laboratory, MIT, 1942-45; Staff Member, Watson Research Laboratory since 1946. Adjunct Assistant Professor of Electrical Engineering, Columbia University, 1953-55; Adjunct Associate Professor, 1957-. Member of American Physical Society and senior member of IRE.

Ralph A. Willoughby

A.B. in Mathematics, 1947, Ph.D. in Mathematics, 1951, University of California at Berkeley. Joined IBM in 1957 and has been working on matrix theory as applied to digital computers, in Applied Mathematics Department at the Research Center in Ossining, New York. He is a member of the American Mathematical Society, the Mathematical Association of America, the Association for Symbolic Logic, the Association for Computing Machinery, the Society for Industrial and Applied Mathematics, Pi Mu Epsilon, Sigma Xi, Phi Beta Kappa.

Contents of Previous Four Issues

April 1957

Vol. 1, No. 2

● Articles

- A 32,000-Word Magnetic-Core Memory
by *E. D. Foss and R. S. Partridge* 102-109
- Computation of e^N for $-\infty < N < +\infty$ Using an
Electronic Computer
by *E. G. Kogbetliantz* 110-115
- The Multipurpose Bias Device—Part I:
The Commutator Transistor
by *B. Dunham* 116-129
- Addressing for Random-Access Storage
by *W. W. Peterson* 130-146
- The Lorenz Number
by *P. J. Price* 147-157
- A Positive-Integer Arithmetic for Data
Processing
by *R. W. Murphy* 158-170
- Irredundant Disjunctive and Conjunctive Forms
of a Boolean Function
by *M. J. Ghazala (Gazale)* 171-176
- A Mathematical Model for Determining the
Probabilities of Undetected Errors in Magnetic
Tape Systems
by *M. Schatzoff and W. B. Harding* 177-180

● Short Communications

- A Self-Clocking System for Information Transfer
by *L. D. Seader* 181-184
- A Symmetrical-Transistor Steering Circuit
by *J. L. Walsh* 185-188
- Determination of Transient Response of a Drift
Transistor Using the Diffusion Equation
by *H. B. von Horn and W. Y. Stevens* 189-191

July 1957

Vol. 1, No. 3

● Articles

- Development of the Permissive-Make Relay
by *B. J. Greenblott and J. E. Wallace* 198-211
- Two-Collector Transistor for Binary Full
Addition
by *R. F. Rutz* 212-222
- Spatial Variation of Currents and Fields Due to
Localized Scatterers in Metallic Conduction
by *R. Landauer* 223-231
- Microwave Amplification by MASER
Techniques
by *W. V. Smith* 232-238
- The Linear Hall Effect
by *P. J. Price* 239-248
- Literary Data Processing
by *P. Tasman* 249-256
- An Experimental 50-Megacycle Arithmetic Unit
by *R. M. Walker, D. E. Rosenheim,
P. A. Lewis and A. G. Anderson* 257-278
- Microsectioning: A Metallographic Technique
for Semiconductor Devices
by *J. S. Hanson* 279-288
